

## CAUTION!

**Cheaper is not always better.** Many contractors and landscapers who offer to "cheaply" abandon a buried oil tank lack the necessary insurance and/or experience for this type of project. Unfortunately, we often hear from property owners who later on discover that their tanks were not properly decommissioned, or that the work was not properly documented. As a result, many attorneys will advise potential buyers against purchasing any property that doesn't have a properly documented tank closure report. Our clients receive all of the necessary documentation they will need to prove that their tank was properly decommissioned.

**Your home is one of your most valuable assets, so protect your investment by using a reputable environmental company.**

This is but one example of an improperly abandoned underground oil tank. Oil and sludge were not removed prior to the tank being filled. Over time, groundwater seeped in and filled the tank, causing the material left inside to spill out and contaminate the surrounding soil.

## UNDERGROUND OIL TANKS

**Why the concern?** All underground steel tanks will eventually leak. On average, these tanks should last 20 years, although underground conditions can cause leakage much sooner than that.

**Now what?** The best (and typically least expensive) option for replacing an underground oil tank is with an aboveground oil tank. There are a variety of tank sizes and construction types to choose from. We can help you select the best fit for your situation.

**Removal vs. Abandonment:** Although either option is allowed, we (and NYSDEC) recommend removing the tank as long as it is accessible.

TANK ABANDONMENT CIRCUMSTANCES

TANK REMOVAL

## OUR SERVICES

**Tank Installations:** Enviro Clean Oil Tank Services provides expert oil tank installation every time. Our aboveground tanks can be installed either inside or outside, depending on your needs. Your peace of mind comes from knowing that all of our fuel tanks include a manufacturer's warranty.

OUTSIDE TANK INSTALLATION

**Tank Testing:** Used on underground tanks. A tightness (leak) test involves using a high powered microphone and acoustic signal processor to locate problems in the tank system. The device is lowered into the tank through a direct fill or vent pipe. During this test, our computer will determine if the tank passes. Test results are immediately known.

COMPUTERIZED TANK TESTING

## SPILL CLEAN UP

**Remediation:** In the event that your tank has suffered a leak, we offer expert remediation services. Enviro Clean Oil Tank Services can coordinate all remediation directly with your insurance carrier and will also handle any required correspondence with NYSDEC.

"Environmental" does not have to be synonymous with uncontrolled spending. Transparency and upfront pricing is our commitment to you. We will address your environmental, safety, and health challenges while strictly adhering to all government regulations and protocols.
